

# Where the Conversion Leaks Are

allbirds.com · CRO Recommendations · August 2026

The most valuable conversion mechanism on this site is the email capture forms, which are bleeding value due to missing and inconsistent labels, creating friction and ambiguity that reduce form completion. Evidence shows one form has no label and another has 'Email', and the 'Get Notified' and 'Sign Up' forms on the same page are inconsistently labeled.

| 10 | <b>Controls without accessible names</b><br>41 of 79 buttons expose no text label, so screen readers and voice control cannot address them and the... | High     | Low    | 2/10 |

## How to read this

Findings marked **verified** were measured directly and are reproducible. Everything else is a hypothesis derived from inspecting the live pages, which is why the PXL evidence questions score zero for those items. Sized opportunities describe the prize if a change works, not expected revenue: roughly 10–30% of A/B tests produce a significant win, and winners tend to overstate their true effect.
